FICTIONAL DEMO DOCUMENT

Project brief: a clearer handoff

Record DEMO-001 | Sample project | No real client or personal data

This fictional project record was created solely to demonstrate PDF viewing, text extraction, parser diagnostics and local search. It is not legal advice, an agreement, or a record of an actual engagement.

Purpose

A small demonstration team wants to make project handoffs easier to understand. The sample workflow collects a short brief, identifies the next decision, records a review checkpoint and keeps the final handoff note alongside its source material.

The interface should let a reviewer find the original wording before acting on a summary. Each sample deliverable therefore has a clear label, a responsible role and an observable review condition. The document remains the evidence; the extracted text is a convenient way to inspect and search it.

Illustrative work plan

Workstream	Sample deliverable	Timing
Understand	One-page summary of fictional requests	Day 1
Prototype	Read-only preview with sample content	Day 5
Review	Checked handoff note and open questions	Day 10

Review roles

Demo coordinator: keeps the sample brief and its handoff note together. Sample reviewer: checks that every open question has an owner and that the source text remains available. These are fictional roles, not named individuals.

Review checklist and decisions

Record DEMO-001 | Page-level search and extraction example

A handoff is ready for review when another person can identify the goal, locate the original input, understand what changed and see which questions remain open. This page provides searchable sample text for that review.

Sample review checklist

- Confirm that the brief states a single purpose and identifies the expected output.

- Check that the source document and extracted text refer to the same sample record.

- Keep unresolved questions visible instead of filling them with assumptions.

- Verify that the handoff note names the next decision and its responsible role.

- Record which checks were performed and which checks were outside this demonstration.

Illustrative decisions

Decision A: keep the demo read-only while a reviewer learns the interface. Decision B: use fictional inputs and a fresh local document library. Decision C: retain the original PDF so a search result can be checked against its source page.

Search exercise

Search for the phrase **handoff note**. The phrase appears in the work plan and in this checklist. Open each result, inspect the page citation, and compare the extracted passage with the original PDF. A matching search result demonstrates local retrieval; it does not establish legal interpretation or professional review.

Completion boundary

This document contains no customer records, financial transactions, personal identifiers, signatures, addresses, or confidential clauses. Its only purpose is to support a safe and reproducible interface demonstration.
